DETAILED ACTION

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arakawa et al. (U.S. 2003/0164243 A1) in view of Yoshida et al. (U.S. 6,621,003 B2).

Arakawa et al. teach a transparent substrate joined by an adhesive to a metal layer, which is etched to form a transparent EMR shield, which can be used on a plasma screen. The transparent substrate maybe polyester (PET) or cellulose (TCA) and release film layers can be joined to both the metal mesh layer and the reverse side of the transparent substrate (abstract, section 0039, section 0078). Yoshida et al. teach the use of a hot melt adhesive film, which may also be a pressure sensitive adhesive to join a metal mesh to a transparent substrate by pressing the metal mesh into the

adhesive film so that the film appears on both sides of the mesh (abstract, Figure 1, col. 4, lines 15-30, col. 9, line 60 through col. 11, lines 55). The instant invention claims the use of a pressure sensitive adhesive to join a metal mesh layer to a transparent substrate. It would have been obvious to one of ordinary skill in the art to have used a mesh layer joined with a PSA in the metal and transparent substrate application of Arakawa et al. in order to avoid an etching step because of the teachings of Yoshida et al. Use of a mesh immersed in a PSA would also allow joining a protective layer to the mesh without an additional adhesive layer.
